

## **School Mission:**

We are committed to the community, to the student, and to the potential radiographer. We will provide preparation enabling students to become entry-level professionals in the field of Diagnostic Medical Imaging. We will provide the community with well educated, fully competent, highly motivated medical imaging professionals. We will attempt to establish a solid foundation and instill the desire for continued professional growth and lifelong learning. We will enhance the ability of our students to work within a team environment, and cultivate the tools with which they may venture beyond by choosing to become dynamic members of the team or leaders in the field of medical imaging.

## **School Goals:**

1. Students / Graduates will be clinically competent.
2. Students will effectively utilize critical thinking, problem solving, and decision making skills.
3. Students / Graduates will demonstrate commitment to professionalism, lifelong learning, and professional growth.
4. Students will communicate effectively both orally and in writing.
5. The program will help fulfill the local community's need for competent, entry-level technologists.
6. Students / Graduates will be adequately prepared to become entry-level radiographers / professionals in the field of Medical Imaging
7. We will strive to retain Students within the Radiography program from selection until graduation.
8. Students / Graduates will be satisfied with the quality of the educational experience they are provided

## **Student Learning Outcomes:**

- Students will demonstrate professionalism in their interactions with coworkers, patients, and the general public.
- Students will obtain a functional understanding of legal, moral, and ethical issues associated with the field of radiography.
- Students will develop notable social-personal skills demonstrating fair and equitable consideration of diverse cultural, societal, and personal differences.

- Students will develop a global knowledge base relative to general education and professional information which will foster the potential for lifelong learning.
- Students will develop strong verbal and written communication skills which will enhance their interpersonal and work related interactions with coworkers and patients.
- Students will exercise critical thinking, creativity and independent self-direction.
- Students will develop both technical and professional skills enabling them to safely and competently perform radiographic procedures and respond to the needs of patients with competence and compassion.
- Students will be able to safely and effectively operate a breadth of conventional and modern radiographic equipment.
