Accreditation Status

We maintain both ongoing

- State approval by the California Department of Public Health —Radiological Health Branch (http://www.cdph.ca.gov/programs/Pages/RadiologicHealthBranch.aspx), and

- National Accreditation with the Joint Review Committee for Education in Radiologic Technology —JRCERT. During our last accreditation visit (2009) we attained the maximum accreditation award of 8 years. The preceding outcomes are reported to JRCERT on an annual basis. This same information may be viewed on their website as well: @ www.jrcert.org. Here they compare Program Effectiveness criteria for each of their accredited radiography programs across the country. [see complete contact information below]

- In February 2014, after reviewing our Interim report, JRCERT reduced our accreditation period from 8 to 6 years and scheduled their next onsite visit for March of 2015. There were a number of items identified presently needing our attention and improvement. We are addressing each of these in due order:

  - Effectiveness data showing 75% job placement within 1 year of graduation
  - Published documents which accurately reflect the program’s policies, procedures, and offerings.
  - Making program’s mission statement, goals, and student learning outcomes readily available to students, faculty, administrators, and the general public
  - Modification of our student pregnancy policy to allow a less restrictive participation by a pregnant student.
  - Assurance that students employ proper radiation safety practices.
  - Assurance that students perform Radiographic procedures under direct supervision prior to the achievement of competency.
  - Assurance that students are directly supervised when repeating unsatisfactory images.
